Wash-out Booth

Adelco's Automatic Wash-Out Booth is compact making it ideal for screenprinters.

Fully Automatic
screen rinsing

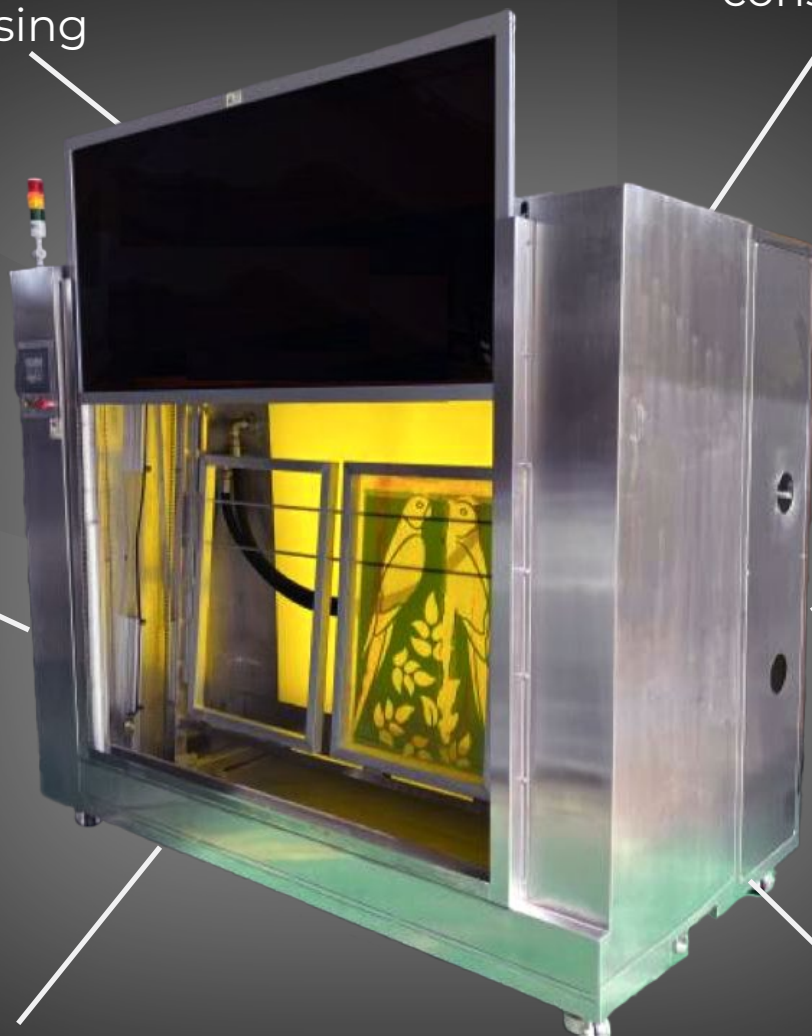

Stainless steel
construction

No water mist

Water pressure
between 3-10kg

Presets for future
use

Adjustable Screen
Size

Features

This fully **automatic screen rinsing system** offers adjustable settings for washing pressure, time, speed, and cycle times, ensuring **stable operation**. Equipped with a high-flow, high-pressure water pump and fan-shaped nozzles, it provides double-sided, synchronized high-pressure spraying with **consistent performance**.

The body is constructed from durable, **corrosion-resistant 304 stainless steel**, and screen size can be freely adjusted within a **maximum range based on customer specifications**. Key parameters such as washing stroke, pressure, cycle count, and movement speed are easily controlled via a touch screen interface.

The system delivers **spray water pressure between 3-10 kg**, with an adjustable control display and a **drying speed of 6m/min** to quickly remove water droplets from screens. A memory function allows for convenient storage of settings, simplifying operation and reducing training requirements compared to manual systems, thereby lowering overall processing costs.

The entire process is mist-free, maintaining a clean and tidy work environment, and supports a wide range of screen printing specifications.

Max Frame	1200 x 1300mm
Function	Screen emulsion washing & screen image developing
Nozzle	SUS nozzle: 20
Nozzle movement	Cross and up-down
Machine Material	304 Stainless steel
Internal Piping Material	Corrosion resistance and anti-rust piping
Water Pump	Lift 65m Pressure: 3-10kg/cm ²
Motor	5kw
Power	220/380V 3 Phase 6kw
Dimensions	2645 x 1250 x 2580mm
Weight	800kg

Manual screen wash-out Booth Models available

A manual screen washout booth with a backlight, high-pressure water jet, manual stencil washer, and screen frame cleaning.
